APPENDIX.

Special Tables, and Statistical Tables I., II., III., IV. and V.

*To the Mayor, Aldermen, and Council of the
County Borough of Birkenhead.*

GENTLEMEN,

I have the honour of submitting to you my Twenty-First Report to the Health Committee on the Health of Birkenhead, viz., that for the year 1912.

I am again privileged to record a satisfactory condition of the Health in the Borough.

In considering our own health returns it is interesting to note that the preliminary figures issued by the Registrar General show that during 1912 872,800 births and 486,982 deaths were registered in England and Wales, showing a natural increase of population of 385,818 compared with an annual average of 395,462 in the preceding five years.

The Birth Rate fell below any figures previously recorded—viz., to 23·8 per 1000.

The Death Rate was also the lowest—13·3 per 1000, being 1·9 lower than the average for the 10 preceding years.

The Infantile Mortality of 95 per 1000 births is also the lowest yet recorded for the Country, the average for the last 10 years being 125.

Epidemic diseases caused 36,123 deaths and violence 19,814.

The population of the United Kingdom in the middle of 1912 was estimated at 45,662,572, England and Wales having 36,539,636 inhabitants, Scotland 4,738,300, and Ireland 4,384,636.

I thought these figures might be interesting.

I have the honour to be,
Gentlemen,

Your obedient servant,

R. SYDNEY MARSDEN,
MEDICAL OFFICER OF HEALTH.

PUBLIC HEALTH DEPARTMENT, TOWN HALL,

April 23rd, 1913.

COUNTY BOROUGH OF BIRKENHEAD

DURING 1912.

SHORT SUMMARY.

Area in Acres	3,850, or a little more than 6 square miles.
Population (at Midsummer)	133,521
Number of Inhabited Houses at time of Census, 1911	24,313
Number of Persons per House at time of Census, 1911	5·3
Rateable Value	£678,968
1d. in the £ yielded for General Purposes	£2,610
1d. in the £ yielded for Sanitary purposes	£2,400
Number of Persons per Acre (Density of Population)	34·6
Birth Rate per 1,000 living	28·2
Death Rate do.	14·7
Zymotic Death Rate per 1,000 living	1·4
Average Death Rate last 10 years	16·0
Deaths of Children under 1 year of age to 1,000 Births	98
Percentage of Uncertified Deaths	0·3
Number of Houses in the Borough, December 31st, 1912	24,771
Houses provided with Ashbins	17,655
Houses provided with Ashpits	7,116
All the houses are provided with w.c's. with the exception of about 100 which have privies. These are in places where at present w.c's. cannot be provided.	

THE SANITARY CONDITION
OF THE
COUNTY BOROUGH OF BIRKENHEAD
DURING 1912.

*Report of the Medical Officer of Health to the
Health Committee.*

The Health of the Borough during the year 1912, as estimated by the general mortality, was in a most satisfactory condition, the Death rate of 14·7 per 1,000 being the lowest we have ever had, and the lowest in the District with the exception of Wallasey.

The Infantile Death rate, 98 per 1000 births, is also the lowest ever recorded in the Borough, and 37 below the average (135) for the last 10 years.

The average death rate in Birkenhead during the past ten years was equal 16·0 per 1,000 persons living. During the five years 1907-1911 it was 15·4. It is obvious, therefore, that the death rate of the Borough is steadily declining, showing the town to be in a healthy and satisfactory condition.

The birth rate for the year, 28·2, is nearly the same as last year, and is satisfactory, being one of the highest rates in the country and higher than the average (24·9) for the 95 provincial towns.

The following Table showing the Birth and Death rates is interesting.

BIRKENHEAD	Year	Population	Density per acre	Death Rate per 1000	Birth Rate per 1000	Infantile Death Rate per 1000 births	Total Zymotic Death Rate per 1000	Phtthisis Death Rate per 1000
	1892	102038	26·5	19·2	32·7	170	3·0	1·5
	1902	113231	29·4	17·5	32·1	151	2·3	1·7
	1912	133521	34·6	14·7	28·2	98	1·4	1·1

Density of population per acre has much to do with the health conditions of the people, and I thought it might be interesting and instructive to consider what is being done in this matter under our present building bye-laws. I have therefore measured up certain areas in the N.W. district of the town which have been built upon within the last few years, with the full sanction of the Corporation as being in accordance with the bye-laws, and therefore presumably fulfilling all the necessary conditions of health.

The areas in question are as follows, the measurements being taken from the latest Ordnance Survey, viz. :—

1. The area bounded by Park Road North, Bidston Avenue and Alderley Avenue, including the sites of Seeley, Cranbourne, Alverstone and Haldane Avenues, containing $38791\frac{5}{9}$ superficial yards=8 acres 71 sq. yards. Number of houses, 218.
2. The area bounded by Mallaby Street, Norman Street and Upper Brassey Street, including the sites of Elfet Street, Colwyn Street, Falkland Street, Thornton Street, Clifford Street, Kingsley Street and Portland Street, containing $38,877\frac{7}{9}$ sq. yards=8 acres 157 yards. Number of houses, 347.

3. The area bounded by Laird Street, Upper Brassey Street and the Schools Playground, etc., and including the sites of Methuen Street and Dundonald Street, containing 11,688½ sq. yards=nearly 2½ acres. Number of houses, 98.

Adding these figures together we get a total area of almost 18½ acres, with 663 houses, equal to 35·8 houses per acre.

At the time of the last census the average number of persons per house in Birkenhead was 5·3; so if we multiply 663 × 5·3 we get 3514 persons on this total area, or 189 persons per acre.

During the year 35 deaths occurred in the area, giving a death rate of 9·9 per 1000, as against 14·7 for the whole Borough.

The modern view of sanitarians is that not more than from 12 to 20 houses and 100 persons should be allowed per acre.

In my opinion the above results show that the present bye-laws allow too many houses to be built on an acre of ground, and steps ought to be taken to enable us to require more yard space in the rear of houses and wider streets in front.

The problem of housing is a very difficult one, and how we are to deal with the lowest strata of humanity is not easily to be solved. There is a large number of people who are homeless, have no furniture, no belongings, and are in every sense dispossessed. A rented house for such people is impossible, and they can only be dealt with by proper lodging houses.

There are other people just on the verge of immersion, but who, with some care, might be rescued from the depths of the submerged.

The matter is one which urgently calls for treatment by the Committee and the Corporation, and I would strongly urge that something should be done on the lines of the Glasgow Family Houses and Common Lodging Houses.

At the same time I wish to make it clear that I am not advocating permanent homes for these people, but that those who are assisted by such provision should be made to understand that there was no intention of doing away with their own responsibilities in life, that they are simply being helped to something

better, and that they must endeavour to attain to such a position as opportunity arises.

Rain Water Conductors.—The remarks which I made on this subject last year still hold good, and the nuisance caused by the present system continues to the public detriment.

Public Conveniences for Women.—Since my last report was published a ladies' lavatory has been provided at Charing Cross, providing for a much felt want.

In the succeeding pages of this report will be found details of the work carried on by the Public Health Department, together with the vital and mortal statistics of the Borough during the year under consideration, as follows:—

DETAILED STATEMENT OF THE WORK OF THE PUBLIC HEALTH DEPARTMENT DURING 1912.

Ordinary Sanitary Operations.—The ordinary sanitary operations of the Department have continued to receive unremitting attention. House-to-house inspections of the cottage property in the Borough have been regularly made. Gulleys and passage drains have been periodically cleansed, public fountains, &c., have been scoured and kept in order, and the systematic removal of ashpit refuse at stated intervals has been carefully superintended.

Summary of Nuisances, &c.—The summary of nuisances investigated and dealt with during 1912 is as follows:—

	1912.
Number of nuisances reported	9059
Number of formal notices given	3095
Number abated after formal notice and without proceedings	9058
Number of cases in which proceedings were taken for ordinary nuisances	1
Number abated after proceedings... ..	1
House disinfecting notices... ..	724

Nuisances at houses let in lodgings	265
Nuisances at common lodging houses	133
Notices for cleansing of filthy houses	13

A brief statement of the other measures taken in 1912 for correcting or getting rid of whatever appeared to be prejudicial to health is subjoined.

Sanitary defects reported by the Inspectors and referred for the action of the Borough Surveyor	480
Matters reported to Water Engineer	189
Houses or parts of houses specially disinfected by formalin or other disinfectants	1267
Notice to whitewash and efficiently cleanse milk-houses, cowsheds and dairies, given and complied with	157
Offensive privies and trough closets ordered for conversion into water-closets	10
Parcels of infected bedding and clothes disinfected at the Disinfecting House	1416
Parcels of infected or discarded bedding and clothes destroyed	525
Carcases of dogs and cats &c. removed from pools or waste land and buried	34
Deposits of putrid fish and other objectionable refuse removed	1
Total						409

In addition to the above, the following work has been done:—

Number of excavations made for the purpose of testing the condition of house drains	160
---	-----

Number of smoke tests applied to drains of
premises reconstructed under the
supervision of this Department ... 212

Number of water tests applied to drains. ... 281

Number of smoke tests applied to the drains
of new buildings, in conjunction with
the Borough Surveyor's Department 247

It will be seen from the above that the work of the Department continues to increase, this is in part due to new Acts of Parliament, to the ever-increasing population and consequent greater crowding, and also on account of the more thorough manner in which examinations are now made. The latter tends to the advantage of the public, both as regards health and comfort, and every effort is made to keep down public or private nuisances dangerous to the community.

District Inspections.—The following is a statement of the work done by the District Inspectors of Nuisances and the Disinfecting Inspector during 1912.

				Number of Visits and Revisits made to Insanitary Property.
District I.—Inspector Croshaw	5880
„ II.— „ Lee	5489
„ III.— „ H. T. Taylor	5100
„ IV.— „ W. H. Tilston	5928
Disinfecting Inspector Isaac Taylor	7359
Total				29756

Smoke Nuisances.—Observations were taken of the smoke emitted from the factory and other chimneys of the Borough during the year 1912. 3 notices were served for the abatement of smoke nuisances, and 4 notices were served to raise chimneys.

Inspection of School Premises.

Working in conjunction with the Education Department, I had 35 schools specially examined by the District Inspectors and reported thereon to the Education Committee.

Inspection of Common Lodging Houses and Houses let in Lodgings

The following is a statement of the work performed during the year 1912 by the Inspector of Common Lodging Houses and Houses let in Lodgings, viz:—

REGISTERED COMMON LODGING HOUSES.

Day Inspections	5093
Night Inspections	403
The total number of registered lodging houses is 20.						

REGISTERED HOUSES LET IN LODGINGS.

Day Inspections	3628
Night Inspections	206

The total number of houses let in lodgings on the register at the end of 1912 was 693.

Corporation Tenement Dwellings.—413 visits were made during the year by the Inspector of Lodging Houses, &c, and 485 nuisances were reported, which have been abated.

FACTORY AND WORKSHOP ACTS, 1901 and 1907.

In connection with the carrying out of the provisions of these Acts, the following is a statement of the work done by the Inspector during the year, viz.:—

816 visits have been made to workshops.

483 visits have been made to bakehouses.

76 visits have been made to workplaces.

110 visits have been made to homeworkers' premises

- 32 workshops, including 1 bakehouse, have been placed on the register during the year, making a total of 425 up to the end of 1912, of which 62 are bakehouses and 45 are confectioners' shops.
- 24 workshops have been closed.
- 7 workshops have been transferred to more suitable premises.
- 110 nuisances in connection with workshops have been reported and abated.
- 18 notices have been served for the abatement of nuisance arising out of defective drainage, and 11 for inefficient ventilation.
- 30 notices to cleanse and limewash the workshops have been served and complied with.
- 197 occupiers of workshops have limewashed their premises under inspection, but without waiting for the formal notice.
- 1 case of overcrowding has been reported during the year.
- 2 workshops have been provided with w.c. accommodation, where none previously existed.
- 10 failures to affix abstract of the Factory and Workshops Act (s. 133).

Lists of out-workers have been carefully kept, and notices in the form prescribed by the Secretary of State, as given in my Report for 1892 (pp. 57 and 58), have been served when necessary.

Laundries.—253 visits were made during the year to the 53 laundries at present on the register.

Bakehouses.—The duties involved in carrying out the provisions of the Acts relating to the sanitary condition of bakehouses have been put under a special Inspector, and during the year 483 visits have been made to bakehouses.

There has been a very great improvement secured by this systematic inspection.

“Shop Hours Acts, 1892 and 1895.”

In carrying out the provisions of these Acts the Inspector has paid 275 visits to different shops, and the occupiers' names and addresses have been placed upon a register specially kept for the purpose, together with the date of his visits.

Seats for Shop Assistants Act, 1899.

[62 and 63 Vict., ch. 21.]

60 premises have been visited under this Act, and 138 visits made during the year ending 1912.

SHOP HOURS ACT, 1904

CLOSING ORDER WITH RESPECT TO HAIRDRESSERS.

In connection with this Order, 971 visits have been made. 1 summons was issued for an infringement of this Order.

SHOPS ACT, 1912.

(Which repeals the Shops Regulations Acts, 1892—1911.)

The Act came into force on the 1st May, 1912, and the following work was done under its provisions:—

3396 shops were visited and 4 prosecutions were ordered for infringements.

In one case for contravening the provisions of the Hairdressers' Closing Order, 1905.	Fined 2/6 without costs.
For failing to close shop on Weekly Half- holiday.	Dismissed with caution.
For employing an assistant after 1-30 p.m. on Weekly Half-holiday.	Fined 2/6 without costs.
For failing to fix a notice in the prescribed form as to Assistants' Weekly Half-holiday.	Fined 5/- and costs.

INSTRUCTIONS.—If an occupier gives out work of more than one of the classes specified in column 1, and subdivides his list in such a way as to show the number of workers in each class of work, the list should be included among those in column 2 (or 3 as the case may be) against the principal class only, but the outworkers should be assigned in columns 3 and 4 (or 6 and 7) into their respective classes. A footnote should be added to show that this has been done.
 + The figures required in columns 2, 3 and 4 are the total number of the lists received from those employers who comply strictly with the statutory duty of sending two lists each year and of the entries of names of outworkers in those lists. The entries in column 2 must necessarily be even numbers, as there will be two lists for each employer—in some previous returns odd numbers have been inserted. The figures in columns 3 and 4 will usually be (approximately) double of the number of individual outworkers whose names are given, since in the February and August lists of the same employer the same outworker's name will often be repeated.

The Midwives Act, 1902.

In connection with the carrying out of the provisions of this Act, a great deal of work was done during the year: not only in visiting the homes of midwives, but in interviewing them in connection with their work and explaining the provisions of the Act and the rules laid down for their guidance by the Central Midwives Board.

During the year 1912, 75 midwives entered their names on the local register as practising in the borough, being the same as last year, but names are constantly being added to the roll. Of the above 75, three died and five of them subsequently left the district, and their names have been removed from the register accordingly. Ten midwives gave notice of change of address, and one had her name taken off the register.

During the year I received twenty-seven complaints against midwives. All of these were carefully investigated by me and the midwives in question interviewed. The Inspector also interviewed 12 midwives on minor matters where no complaint had been made.

Notices were received from midwives of 61 still births (26 male and 35 female) having occurred; and 156 cases were notified in which medical aid had been called in.

The Inspector of midwives paid 155 visits of inspection to midwives, and I also inspected the bags and registers of a considerable number.

I received great assistance in connection with enquiries under this Act from the Female Health Visitors of the Birkenhead Society for the Prevention of Cruelty to Children, who work in conjunction with the Health Department by special arrangement, and a number of reports were made by them to me in important cases.

57 cases of unnotified births occurred. 25 of these were attended by medical practitioners, 14 by certified midwives and 18 by uncertified handy-women.

NOTIFICATION OF BIRTHS ACT, 1907.

This Act was adopted in the Borough on January 3rd, 1912, and three women Health Visitors were appointed in connection with carrying out the work.

The following is a record of the cases visited by the women Health Visitors during 1912, viz. :—

3407 visits were paid to the homes.

1172 re-visits were made.

3134 infants were found to be breast fed.

273 infants were fed on artificial foods.

Medical attention was advised in 116 cases and 104 cases of ophthalmia were carefully watched and recovery resulted in each case.

7 cases of nuisance were reported to the Nuisance Department. 5 cases were referred to the Charity Organisation Society.

The Ladies' Committee of the Society for Prevention of Cruelty to Children with whom we work jointly in regard to the Health Visitors, have allowed extra nourishment in the case of 43 children, and milk and cereals to 91 nursing mothers.

INFECTIOUS DISEASES (PREVENTION) ACT, 1890.

135 Library books were collected from infected houses and
2 books were destroyed.

CLEANSING OF PERSONS ACT, 1897.

No-one applied to be cleansed under the provisions of this Act, but special baths are provided for this purpose at the disinfecting station in Corporation Road.

Seizure and Destruction of Unwholesome Meat, Fish, and Vegetables.

The Meat and Food Inspector has furnished the following particulars of meat, &c., unfit for human food, seized and destroyed during 1912.

The total weight of the meat destroyed amounted to 291·24 tons. Some of this was voluntarily surrendered by the butchers, they having called the Inspector's attention to it.

As in all recent years, a considerable proportion of the meat taken was on premises in connection with the Foreign Animals Wharf, Woodside. The total number of animals killed was—

AT WOODSIDE LAIRAGE.

Proceedings taken under the "Sale of Food and Drugs Acts,
1875 to 1907."

The Chief Inspector (Mr. William Dawson) gives the following summary of proceedings taken under these Acts during 1912.

During the twelve months ending the 31st December, 1912, the following samples were taken and analysed, viz. :—

				Samples taken formally.		Samples taken informally.
Milk	117	...	—
Butter	61	...	7
Cheese	27	...	4
Coffee	10	...	3

Strawberry Jam	1	...	—
				292		16

Total samples analysed during year...308

Out of the above, 17 samples of Milk, 1 of Coffee and 1 of Malt Vinegar were reported adulterated and proceedings were taken in respect to 4 samples of Milk and 1 of Malt Vinegar.

With reference to the remaining samples reported adulterated the Health Committee considered it was inadvisable to institute proceedings, and the particulars of the respective cases, and the circumstances which determined the Committee's decision are as follows, viz.:—

Coffee sample No. 36	...	5 per cent of Chicory.
Milk sample No. 50	...	3 per cent of added water.
Milk sample No. 84	...	6 per cent deficient in fat.
Milk sample No. 137	...	2 per cent of added water.
Milk sample No. 251	...	1 per cent of added water.
Milk sample No. 278	...	1 per cent of added water.

In the case of Coffee sample No. 36, reported to contain five per cent of Chicory, the Committee gave instructions that the shopkeeper should be cautioned in the matter.

In the case of Milk sample No. 50, reported to contain 3 per cent of added water, the bottle containing the portion intended for the Public Analyst was unfortunately broken in transit through the Post Office, and consequently the sample could not be officially analysed.

The third portion of the sample retained by the Inspector was subsequently sent to the Public Analyst with the result above stated.

It may be explained that this sample was taken in course of delivery from a farmer to a shopkeeper at the same time as sample No. 51, reported to contain 5 per cent of added water, was obtained, and upon proceedings being taken against the farmer the Magistrates dismissed the case upon payment by the farmer of 16/6 costs, as shewn in the following schedule.

In the case of Milk sample No. 84 the total solids in the milk were found to be 11.9 or .4 above the limit fixed by the Board of Agriculture, and under the circumstances it was not considered advisable to institute proceedings.

With reference to Milk samples Nos. 137, 251, and 278 reported to contain respectively—

No. 137 ... 2 per cent of added water

No. 251 ... 1 per cent of added water

No. 278 ... 1 per cent of added water

the Health Committee did not consider it advisable to institute proceedings.

Further samples of Milk were, however, taken in course of delivery to the shopkeeper from the wholesale dealer and the farmers in connection with sample No. 137, and as upon analysis the samples (Nos. 138, 139, 140 and 141) were found adulterated, proceedings were taken with the results shewn in the following schedule.

In connection with samples Nos. 288, 301, 308 and 309, it may be explained that sample No. 288 was purchased from a small shopkeeper in the Borough, and sample No. 301 from a wholesale milk dealer in course of delivery to the small shopkeeper.

Samples Nos. 308 and 309 were taken in course of delivery from the farmer supplying the wholesale milk dealer above mentioned, and when the four cases came before the Court the Magistrates ordered the small shopkeeper (No. 288) and the wholesale dealer (No. 301) to pay the costs, and fined the farmer 40/- and costs in each of the two cases Nos. 308 and 309.

In the case of a sample of Butter (No. 3) reported to contain 16·5 per cent of water, or ·5 per cent more than allowed by the "Sale of Butter Regulations, 1902," proceedings were not instituted against the shopkeeper, but full particulars respecting the sample were supplied to the Board of Agriculture and Fisheries.

With reference to the 7 samples of Butter, 4 of Cheese, 3 of Coffee and 2 of Lard taken informally, they were found pure.

During the year 1 sample of Butter was obtained, but not forwarded to the Analyst owing to proper notice having been given at the time of purchase.

The particulars respecting the samples in which proceedings were taken are as follows :—

Quarter Ending	Article.	No.	Amount of Adulteration.	Fine Inflicted.	Costs Imposed.
1912.				£ s. d.	£ s. d.
March 31	Milk ..	40	Deficient in fat to the extent of 10 %/o ..	1 0 0	0 17 0

Dairies, Cowsheds and Milkshops' Regulations.

No proceedings for infringement of the Regulations had to be taken during this year.

Contagious Diseases (Animals) Act, 1886.

The Milkhouses.—The regulation of dairies, cowsheds, and milk-shops, and the supervision of milk-sellers, has had systematic attention for a number of years. Special care is taken that the ventilation, lighting, cleansing, draining, and water supply of premises used for milk-trade are thoroughly efficient. The register of milk-sellers is revised week by week. The total number of milk-shops is 196, in addition there are 19 purveyors of milk, 9 cowsheds, and 49 farmers resident outside the Borough, registered to purvey milk inside the Borough.

Twice every year notice is sent to all the milk-sellers requiring that the walls and ceilings of every room in the occupation of Registered Milk-sellers, used for storage or sale of milk, shall be lime-washed, that is to say, in March and September; but if the walls are painted, then they must be washed and thoroughly cleansed twice every year, in March and September.

Meteorological Results.

The noteworthy features of the meteorology of the year are given in the following tabular statement, which has kindly been prepared by W. E. Plummer, Esq., M.A., F.R.A.S., Director of the Observatory, Bidston Hill, Birkenhead, who also furnishes particulars weekly of the daily observations taken under his directions, from which Table IV. in the appendix is compiled.

12		Mean Tempera- ture	Mean Barometer	Rainfall 1 ft. above ground
		° F	Inches	Inches
January	8.3	29.397	3.675
February	41.6	29.616	1.092
March	44.7	29.615	3.609
April	49.1	30.173	0.202
May	52.3	29.973	1.595
June	57.0	29.788	2.348
July	61.5	29.937	3.506
August	55.4	29.705	5.862
September	52.5	30.183	1.166
October	48.2	29.879	2.923
November	45.0	29.975	2.155
December	45.1	29.734	2.017

Mean Barometer for the whole year 1912 = 29.878 inches.

Mean Barometer for the past 45 years = 29.923 inches.

Number of wet days in the year 1912 = 200 days.

Total amount of rainfall at Bidston. 1912 = 30.170 inches.

Average rainfall for last 45 years = 28.520 inches

Barometer.—The mean barometer of 1912 (29.878 inches) was lower than last year and 0.045 lower than the average mean for the last 45 years. Detailed particulars respecting the barometric pressure, temperature, rainfall, wind, humidity of the air and the proportion of cloud to clear sky &c., will be found in Table IV.

Rainfall.—The rainfall of 1912, 30.170 inches, was much higher than last year and higher than the average of the previous forty-five years.

Year.	Total Amount Rainfall in inches at Bidston	No. of wet days in the year
1901	25.192	190
1902	25.566	200
1903	34.418	224
1904	25.175	196
1905	24.011	192
1906	28.076	196
1907	26.588	200
1908	28.902	190
1909	28.447	202
1910	28.585	227
1911	25.265	170
1912	30.170	200

Average rainfall for 45 years = 28.52 inches.

The figures for the years 1867 to 1899 are given in my Report for 1904, and for 1886 to 1909 in my Report for the latter year.

For the relative mortality of different portions of the year, see under Births and Deaths.

Water Supply.—The water supply of the Borough is from deep wells in the old red stone, and is of excellent quality.

PREVALENCE OF ZYMOTIC SICKNESS DURING 1912.

Notification of Cases of Dangerous Infectious Diseases.—The Infectious Disease Notification Act, 1889, requires householders and medical men in attendance to notify cases of dangerous infectious diseases to the Sanitary Authority, and gives facilities for supplementing the statement of the mortality from zymotic diseases, month by month, as they were reported. The diseases which require to be notified to the Authority as “dangerous infectious diseases” are:—

Small-pox.	Fevers	Typhus.
Scarlatina.		Typhoid.
Diphtheria.		Continued.
Membranous Croup.		Relapsing.
Erysipelas.		Puerperal Septicæmia.
		Cholera.

The cases notified appear in the following return, showing that 1055 cases were notified during the year, being 343 more than the number notified last year.

The notification of Measles was discontinued after 7th August, 1907.

The following Table gives the number of Notifications of Dangerous Infectious Diseases in each month of the year.

1912.	Smallpox	Scarlatina	Diphtheria	Typhus Fever	Typhoid Fever	Puerperal Fever	Fever	Cholera	Mem. Croup	Erysipelas	TOTAL
January	74	19	..	2	9	104
February	43	10	..	4	1	1	13	72
March	50	13	..	1	1	10	73
April	44	9	..	2	1	2	5	63
May	67	15	..	2	2	2	88
June	102	8	..	2	2	7	121
July	97	7	..	1	3	3	111
August	102	8	..	4	1	2	117
September	59	13	2	3	5	82

1912	790	131	..	23	19	10	..	82	1055

The figures for the years 1882-1905 will be found at page 25 in my report for 1905.

There were 2 cases of cerebro-spinal fever notified.

Small-pox.

No cases of Small-pox were notified during the year.

VITAL AND MORTAL STATISTICS FOR THE YEAR.

Area—The Borough has an area of 3850 acres, or a little more than six square miles.

Population—The Census was taken in England and Wales on April 2nd, 1911, and the result as given in the Preliminary Report on the same showed the number of persons in Birkenhead to be 130,832, being 19,917 in excess of the number enumerated in the Census taken on April 1st, 1901. The complete Census Report shows the population to be 130,794.

For the purposes of this Annual Report an estimate is required of the number of persons living at Midsummer, 1912, and I have estimated that on the 30th June of that year the population was 133,521, and on this estimate have based the following statistics.

At the time of the 1901 Census the number of inhabited houses was 19,744, giving an average number of persons per house of 5·6; the number of houses in the Borough at the time of the 1911 Census was 24,343 giving an average number of persons per house of 5·3.

I am indebted to the Chief Constable for the following Return of uninhabited property in the Borough of Birkenhead for the half year ending 31st December, 1912 :—

District	Half-year ended 31st Dec., 1912.					Half-year ended 30th June, 1912.				
	Private Houses	Shops	Cot-tages.	Dock Cot-tages	Total	Private Houses	Shops	Cot-tages	Dock Cot-tages	Total

Totals	255	146	164	73	638	337	178	355	87	957

Total uninhabited and unoccupied property,

31st December, 1911.....1027, decrease of 389

The approximate estimate of houses of all

descriptions within the Borough is.....26223

The approximate estimate of schoolrooms,

warehouses, etc., is1517

I am indebted to the Borough Surveyor for the following information relating to the

Number of New Houses erected in the Borough.

April 1st, 1911, to December 31st, 1911 ... 202

January 1st to December 31st, 1912 ... 273

The number of houses demolished since taking of Census in 1911 was 47, namely, 3 in 1911 and 44 in 1912, a net gain of 428.

I am again able to repeat that the Health returns and the Birth and Death rates for the Borough are in every way satisfactory, and it will be a matter of gratification to the Health Committee to find that notwithstanding the steady growth in the population which is taking place, as shown by the last Census, and the consequent considerable increase of density, or in other words, number of persons per acre, yet their efforts to maintain a high state of sanitation in the Borough have borne fruit in a marked degree, and in a continued improvement in the public health.

As I have repeatedly pointed out the increase of the density of population in the absence of the counteracting influence of sanitary work would probably have greatly increased the mortality, and the improvement indicated could not possibly have taken place.

The following table gives the estimated Midsummer Populations of the Wards 1911 to 1920.

WARDS	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920

Births and Deaths in Birkenhead.—During the year 1912 the returns of the local registrars recorded 3797 births and 1964 deaths in the Borough of Birkenhead. The natural increase in the population in 1912 was therefore 1833. Of the births 1924 were males and 1873 were females; of the deaths 1023 were males and 941 were females.

Further particulars as to the births and deaths in the Borough registered in each quarter of the year, and in each township are given in the subjoined table. Those occurring in Union Work-house are entered separately. Twenty-three births have been subsequently transferred by the Registrar General to other districts. These have not been deducted in the following table, but 4 births sent to us by the Registrar General have been included. This table is made up week by week.

BIRTHS	1st Qr.		2nd Qr.		3rd Qr.		4th Qr.		1912		Total

The next table shows the revised estimated population of Birkenhead, the density of population and the number of births, deaths and zymotic deaths, and also the birth and death rates deducible from these figures for the years 1900 to 1912. These figures for the years 1878 to 1899 were given in my reports for the years 1898 and 1899. This table has been revised since the figures of the 1911 census have been published.

Year	Revised Estimated Population at Midsummer	Persons per acre.	BIRTHS.		DEATHS.		ZYMOTIC DEATHS.	
			Number of Births	Birth rate per 1000 per annum	Number of Deaths	Death rate per 1000 per annum	Number of Deaths	Death rate per 1000 per annum
1900	110,042	28·5	3428	31·1	1965	17·8	209	1·8
1901	111,377	28·9	3230	29·0	2061	18·5	353	3·1

**Infantile Mortality during 10 years,
1903 to 1912.**

Year.	No. of Births.	Total Deaths of Infants under 1 year.	Deaths from Diarrhoea under 1 year.	Total Deaths of Infants per 1000 Births.	Deaths of Infants from Diarrhoea per 1000 Births.
1903	3516	548	104	155	29.5
1904	3805	688	136	180	35.7
1905	3707	481	88	129	23.7
1906	3733	565	152	151	40.7
1907	3727	410	30	110	8.0
1908	3775	516	67	136	17.7
1909	3737	458	33	122	8.8
1910	3730	507	56	135	15.0
*1911	3732	509	134	136	35.9
*1912	3774	371	20	98	5.2

* This is the revised rate after the Registrar General has transferred births from other towns. It cannot be compared with other towns unless we had all their revised rates.

The proportion of Deaths of Infants under One year to the Births registered.—The proportion in Birkenhead Borough in 1912 was equal to 98 per 1000, and compares very favourably with that of other towns. It varied greatly in the different towns in the N.W. District—from 145 in Burnley, 125 in Wigan, 118 in Blackburn, 123 in Preston, 107 in Stockport, 98 in Bolton, 117 in Oldham, 124 in St. Helens, 125 in Liverpool, 121 in Manchester, 108 in Bootle, to 98 in Birkenhead.

Tabular Statements.—In the appendix to this Report are tabular statements of the year's mortality within the Borough, classified according to the diseases, ages and localities, a weekly register of deaths and of meteorological results, together with a return of the deaths in the Birkenhead Union Hospital and Workhouse, etc.

Table I. shows the deaths registered in the whole Borough during 1912, arranged with reference to the age at which death occurred in each case. They are disposed in four sub-tables—the deaths in the townships of Birkenhead and Claughton in the first, deaths in Tranmere (exclusive of the Union premises) and Oxtan in the second, the deaths in the incorporated portion of Higher Bebington in the third, and the deaths in the Union Hospital and Workhouse in the fourth. The deaths of infants are entered up in three columns—those under one year, those of one year and under two years, and those turned two years and under five. Then follow the deaths of children and young persons, those turned five years and under twenty; and of adults those turned twenty and under forty, and those turned forty and under sixty. In the last two columns are the deaths of old people, those turned sixty and under eighty, and those of eighty and upwards. Reference to this table will show that, of the gross local mortality for 1912, the deaths of infants under one year of age accounted for 371, those over one year but under five years of age 267, children and young persons 133, adults 622, old people sixty years of age and upwards 571.

The relative proportion of deaths in 1912 among the infants, children and young persons, adults and old people, to the whole number of deaths, in certain sub-divisions of the borough, in the premises controlled by the Guardians of the Poor, and in the entire incorporated area, is readily shown in tabular form, thus :—

Percentage of Deaths at certain ages to Total Deaths.	Under 1 Year	Age between															85 years and upwards.
		1-2	2-3	3-4	4-5	5-10	10-15	15-20	20-25	25-35	35-45	45-55	55-65	65-75	75-85		
Birkenhead and Claughton	12.57	6.31	1.93	1.37	0.50	2.64	0.96	0.50	0.71	2.44	3.92	5.54	4.53	6.77	3.20	0.61	
Tranmere & Oxtion	5.24	1.57	0.66	0.35	0.30	0.66	0.45	0.56	0.30	2.03	1.57	2.59	3.66	3.36	2.69	1.06	
Bebington	0.20	0.05	0.05	..	0.15	0.20	0.15	0.19	0.20	0.30	0.15	0.05	
Union Hospital and W'house	0.86	0.35	0.10	0.10	..	0.20	0.20	0.45	0.56	1.52	1.83	2.49	2.54	3.56	1.37	0.45	
Birkenhead Borough	18.88	8.24	2.69	1.82	0.81	3.55	1.68	1.52	1.73	6.21	7.48	10.74	10.94	14.00	7.43	2.18	

In this respect the local mortality compares favourably with the mortality in most great cities and boroughs. The percentages taken out for Bebington have little significance, the number of deaths being so small.

The Registrar General states that the factor for correcting the general death rate for Birkenhead for 1912 is 1.0324.

Table II. is the weekly register of deaths in the Borough of Birkenhead for 1912. The deaths are entered into three sub-tables, representing Birkenhead; Claughton, Tranmere, Oxtion and Bebington, and the Union Hospital and Workhouse. Table III. is a summary of the weekly register of deaths. Table IV. is a Weekly Condensed Register of Meteorological Results. Table V. is a street register of deaths.

The Classification of Death Causes.—The causes of death, as they appear in Tables I. and II. in the appendix, are systematically classified according to the principles laid down by the late Dr. W. Farr, the nosology being that adopted by the Registrar-General until within the last few years, which experience has shown to be well suited for statistical purposes. The death causes are arranged under classes and orders, the latter corresponding to the families of Natural History. Genera, or what in diseases would be varieties, are not distinguished. All death

causes are thus conveniently classified under 140 heads, some of which however, include diseases very distinct from one another.

At the beginning of Table I. are the totals of deaths from all causes, and on the next line the totals of deaths from specified causes. The deaths which it is necessary to refer to unspecified causes are not only those ascribed in legal phraseology, to "visitation of God" or "natural causes," but those which, with almost equal vagueness, are classified as due to "tumour," "coma," etc. The deaths from specified causes are then divided into five classes. Class I. (the zymotic) embraces all diseases, either epidemic, endemic or contagious, which are induced by some specific body, or by want of, or by the bad quality of food. The diseases coming under Class II. (constitutional or cachetic) appear to be due to a bad habit of body, and possibly may sometimes be hereditary. Class III. takes in diseases the effects of which are manifest in disturbing or obliterating the function of particular organs or systems. Class IV. includes the conditions tending to produce death which are the incidental results of the formative, reproductive and nutritive processes. Class V groups together all deaths which are the evilent and direct result of physical or chemical forces.

Deaths from Zymotic Diseases. The deaths from zymotic diseases include 91 by what have been termed the chief zymotics (certain diseases belonging to the miasmatic order), viz, measles 52, scarlatina 10, diphtheria 17, membranous croup 5, f-vers 5, and puerperal septicæmia 2. The remaining 106 were entered to what have been called minor zymotics (diseases less prevalent, less fatal, or less obviously zymotic in character), viz., whooping cough 49, erysipelas 5, influenza 11, diarrhœa 33, syphilis 3, cerebro-spinal meningitis 2, and other zymotic diseases 3.

Relative Fatality of Chief Zymotic Diseases.

The following table shows at a glance the relative fatality of the chief zymotic diseases for the year on the corrected estimate of population.

Year	Deaths from Zymotic Diseases.								Death rate per 1000 living.							
	Smallpox	Measles	Scarlatina	Diphtheria	Whooping Cough	Typhus Fever	Typhoid Fever	Diarrhoea	Smallpox	Measles	Scarlatina	Diphtheria	Whooping Cough	Typhus Fever	Typhoid Fever	Diarrhoea

Vaccination.—Mr. John Carter, Clerk to the Board of Guardians of the Birkenhead Poor Law Union, has kindly supplied me with the following *latest completed* information relative to vaccination in the District, viz. :—

From 1st January, 1911, to 31st December, 1911.

No. of Births	3772
Successfully Vaccinated	2940
Insusceptible	28
Had Smallpox	None
Number in respect of whom Statutory Declarations of conscientious objection have been received							290
Died Unvaccinated	350
Postponed by Medical Certificate	34
Removed to Districts the Vaccination Officers of which were duly notified							30
Removed to places unknown or which cannot be reached							73
In Abeyance, up to 8th February, 1913							27

Taking 350 who died, and 103 who removed to other districts, from 3772, it leaves 3319 children who could possibly be vaccinated. Of these 2968 were vaccinated (28 being Insusceptible), equal to 89.42 per cent, whilst 61 were in abeyance or postponed by Medical Certificate.

It is gratifying to find that only 290 (8.7 per cent) were unvaccinated owing to objections on the part of the parents, a fact on which Birkenhead is to be congratulated.

Tuberculosis Order, 1911.

Miss M. Gibson was appointed on 3rd April, 1912, as Woman Inspector under this order, and the following is a statement of the work done by her during the year, viz.:—

Total No. of cases notified during 1912—

Under 1911 Regulations	345	
Under In Hospital Regulations	131	
Under 1908 Poor Law	116	
	—	592
Duplicate cases, <i>i.e.</i> , notified twice over	112
		<hr/>
Deaths out of 480	150
Removals from district	34
Cases re-examined found not suffering from phthisis	15
Wrong address, no information to be obtained	2
No. of insured persons on register—Men	60	
Women	9	
	—	69
No. of visits paid to domiciliary cases	104
No. of visits paid to insured persons	139
Total No. of visits paid to all cases of tuberculosis		1376
No. of cases treated in Sanatoria—		
Through Corkhill Fund	18	
National Insurance Committee	8	
Other means	17	
	—	43
Cases treated in other Hospitals not Sanatoria	9
Cases removed to Union Infirmary...	57
Special enquiries for M.O.H. into other matters	39
Cases of neglect referred to N.S.P.C.C.	2
No. of houses where disinfection was carried out after death, or where patient had been removed to hospital, or had left the house	204

No. of defects notified by the Inspector to the Medical
Officer of Health 10

Enquiries were made into the home conditions of 317 cases,
with the following results:—

Houses clean, ventilation good, generally satisfactory	174
Houses fairly satisfactory	111
Houses dirty, no precautions taken	32
Cases where some improvement was made	26
Cases of poverty, with very indifferent homes	83
In receipt of parish relief	11
Families living in sub-let houses	25

Alleged causes of the starting of the disease—

With previous family history of tuberculosis	115
Direct contact with infected case	17
Following neglected colds	57
,, previous attack of pneumonia	24
,, pleurisy	7
,, typhoid	3
,, measles	4
Intemperance	8
Overwork	8
Through nature of employment (2 stone quarry men, 1 dry soap works)	3
Could not give cause	71

No. of patients lived all their lives in Birkenhead	131
,, between 30 and 40 years in Birkenhead	5
,, 20 and 30	9
,, 10 and 20	6
,, 5 and 10	16
,, 3 and 5	12
,, under 3 years in Birkenhead	20

This table is not complete as the information could not be got in
every case.

STATISTICS OF ROOM ACCOMMODATION.

Patients sleeping out of doors	1
„ in separate room	121
In separate bed with 1 other person in same room	5
„ 2 other persons	„	„	„	...	8
„ 3 „	„	„	„	...	7
„ 4 „	„	„	„	...	2
„ 5 „	„	„	„	...	3

The average Phthisis Death Rate for the last 10 years is 1.23 per 1000, equal to 154 deaths per year.

NATIONAL INSURANCE ACT, 1911.

(Which came into operation on the 15th July, 1912.)

In connection with the carrying out of the provisions of this Act, a scheme for the establishment of a Tuberculosis Dispensary was submitted to the Health Committee on the 27th August, 1912, and approved of by them.

It passed the Council on September 4th, and was sanctioned by the Local Government Board on February 8th, 1913.

Dr. Cyril Banks was appointed Tuberculosis Officer, and Assistant Medical Officer of Health on October 25th, but did not take up his duties until 1st January, 1913.

Inquests—The number of inquests held during 1912 was 162, thus 8 per cent. of the sum of the deaths in the Borough formed the subject of official enquiries. Out of the 162 inquests held, 3 were upon the bodies of infants whose deaths were due to being overlain.

Deaths not Certified.—Not all the death causes which are classified represent diseases or symptoms observed and certified by medical men in attendance during the last illness, or verdicts following official investigation. A significant proportion of the death causes are entered in the register on the doubtful testimony of deceased persons' relatives or friends, or fellow lodgers. The registrars have, therefore, been required to mark in the returns furnished, every death not certified by a registered practitioner, or made the subject of a coroner's inquest. In 1912, out of the 1,964 deaths registered, 7 were marked "not certified," that is 0·3 per cent. The causes of the 7 deaths were entered in accordance with the statements of persons giving information to the registrars as follows:—

Heart Disease	1
Old Age	1
Cancer	1
Premature Birth	1
Hæmorrhage	1
Measles	1
Epilepsy	1

though how such conclusions were arrived at does not appear. In my opinion such deaths ought not to be registered without a Coroner's certificate.

The proportion of uncertified deaths to the sum of the deaths was as already stated, 0·3 per cent. as compared with 0·6 per cent. in 1911.

Deaths classified according to Localities.—Tables I., II., III., and IV., in the appendix, having been fully discussed, are followed by Table V., in which the deaths registered during 1912 are classified according to the localities in which they occurred. Opposite each street or place is the number of deaths from all causes and from zymotic diseases, registered as occurring in that street or place during the year. As it was felt that particulars of the number of deaths from all causes, from zymotic diseases and of infants in each ward, would prove interesting, and as the Street Register does not afford this information, the Table here subjoined has been drawn up.

1912			Estimated Population at Midsummer, 1912.	Deaths from All Causes		Deaths from Zymotic Diseases		Death rate per annum.	Infantile Death Rates per 1000 Living	No. of Deaths under 1 year

Illegitimacy.—Statistics relating to illegitimacy are important, not merely on account of the bearing which such a subject has upon the social life of the community, but also with a view ultimately of showing to some extent the influence which illegitimacy exerts upon the "chances of life" of infants, as it is well known that the death-rate of illegitimate children is considerably greater than that of those born in wedlock. I have

thought it desirable, therefore, to continue these statistics in this report, as the subject is one of some interest.

The following table gives the total number of legitimate and illegitimate births, with the rates per 1000 of births and per 1000 living, and statistics relative to the deaths of such children under one year of age.

Illegitimate Births and Deaths, 1912.

Registrar's Sub-District	Estimated Population 1912.	BIRTHS		ILLEGITIMATE BIRTHS		Total deaths of children under one year of age	Deaths of illegitimate children under one year of age	Percentage of deaths of illegitimates to total deaths under one year of age
		Legitimate	Illegitimate	to 1000 living	to 1000 births			
Birkenhead ..	66437	2079	67	1·0	32·2	234	8	3·4
Tranmere, Oxtou, Cloughton, and Bebington and Workhouse ..	67084	1575	72	1·7	45·7	137	15	10·9
Total	133521	*3654	139	1·0	38·0	371	23	6·1

*23 births have since been transferred to other places. Hence the difference in total as given on unrevised number.

HOUSING OF THE WORKING CLASSES ACTS, 1890 to 1909.

During the twelve months ending 31st December, 1912, a large amount of work was carried out by the Department under the provisions of the Housing of the Working Classes Acts, 1890 to 1909, and the Regulations made by the Local Government Board dated 2nd September, 1910, the particulars of which are as follows, viz. :—

The number of dwelling houses inspected under and for the purposes of Section 17 of the Act of 1909 during 1912, and which, on inspection, were considered to be in a state so dangerous or injurious to health as to be unfit for human habitation ... 161

The following representations were made to the local authority during the year with a view to the making of closing orders, viz. :—

1 to 15 Chapel Place
 1 to 9 Chapel Square
 1 to 5 Marsden Villas
 25 Waterloo Place
 1 to 5 Upper Beckwith Street
 2 to 6 Brassey Street
 7 Upper Beckwith Street and 1 Anglesea Terrace, 8 Brassey Street and 7 Anglesea Terrace, 12 Brassey Street and 12 Anglesea Terrace, and 3, 4, 5, 6, 8 and 10 Anglesea terrace
 3 to 11 and 6 to 14 Laxey Terrace, 14 Brassey Street and 13 Laxey Terrace, and 13 Brassey Street and 16 Laxey Terrace
 184 and 186 Chester Street
 8 to 18 Vicars Court
 2 to 14 Havelock Street
 2 to 14 Back Havelock Street
 1 to 11 Havelock Street
 3 to 11 Back Havelock Street
 1 to 15 Myrtle Street
 3 to 15 Back Myrtle Street
 1 to 7 Kellett's Place
 8 to 12 Kellett's Place
 73, 75 and 77 St. Paul's Road
 2 Oaktree Place and 1 to 11 Oaktree Terrace

The number of closing orders made	12
-----------------------------------	-----	-----	-----	----

The number of dwelling houses the defects in which were remedied without the making of closing orders	10
---	----	-----	-----	-----	-----	-----	----

In connection with this work it may be explained that there are a large number of houses, the subject of representations, now in course of being altered and made fit for habitation, under arrangement with the Health Committee, and in which the work was not completed at the end of the year.

The number of dwelling houses which, after the making of closing orders, were put into a fit state for human habitation	1
The number of dwelling houses which, after the making of closing orders, were altered into stores	3
The number of demolition orders made	11
The total number of dwelling houses demolished	38

The general character of the defects found to exist were back to back houses, solid backed houses, no through ventilation, crowded and confined conditions, the want of, or insufficient yard space, water supply and sanitary conveniences, and general repairs.

In addition to the dwelling houses dealt with under Section 17, 39 houses have been inspected and made fit for human habitation under Sections 14 and 15 of the Act of 1909.

988 dwelling houses have also been thoroughly inspected during the year under the provisions of the Public Health Act 1875, and the various defects found therein remedied, and the houses put into a proper and satisfactory condition.

I think the year's record must be considered a satisfactory one.

I am, Gentlemen,

Your obedient servant.

R. SYDNEY MARSDEN,

Medical Officer of Health.

PUBLIC HEALTH DEPARTMENT,
TOWN HALL, BIRKENHEAD.

23rd April, 1913.

THE INFECTIOUS DISEASES HOSPITAL,
TOLLEMACHE ROAD.

Report for the Year 1912.

HOSPITAL VISITING SUB-COMMITTEE.

MR. ALDERMAN E. G. MASON, J.P., Chairman.

MR. ALDERMAN H. L. PEARSON, J.P., M.R.C.S.

MR. ALDERMAN THOMAS SHAW.

MR. ALDERMAN MICHAEL BYRNE.

MR. COUNCILLOR W. W. KELLY.

MATRON:

MISS EMILY YEOMANS.

There has been no addition to the number of beds in the hospital during the year. The Staff consists of the Matron, 17 nurses, 19 female servants, an engineer, 2 porters and 2 gardeners.

The total number of patients treated in the hospital during the year (January 1st to December 31st) was 711; of these 633 were admitted during the year, and 78 remained in hospital from 1911. Out of those admitted 13 died, giving a death-rate of 2.05 per cent., a very low percentage.

The following table gives a summary of the cases treated in the hospital during the year 1912, along with the results obtained.

DISEASES	M.	F.	Re- covered		Died	
			M.	F.	M.	F.
Scarlet Fever—remaining ..	27	45	27	45
admitted ..	280	288	276	286	4	2
Typhoid—admitted ..	1	4	1	4
Diphtheria—remaining ..	1	5	1	5
admitted ..	29	31	24	29	5	2
Total Treated..	338	373	329	369	9	4

Thus out of 633 cases admitted 13 died (2.05 per cent.)

The smallpox hospital, containing 44 beds, stands in its own ground, and is provided with a separate administration block, washhouse, mortuary &c., and is entirely distinct from the other hospital.

The following are the statistics regarding

The Smallpox Hospital, 1912.

Number of Patients.	M.	F.	Died.	
			M.	F.
Admitted 1912	0	0	0	0
Total treated during year ..	0	0	0	0

THE E. P. SMITH MEMORIAL CONVALESCENT FUND.

FOR PATIENTS WHO HAVE BEEN TREATED IN THE FEVER
HOSPITAL.

Particulars relating to this fund were given in my Report for 1903.

There were no suitable cases to receive benefit by the fund during the year 1912.

The fund is regularly used as far as possible.

APPENDIX.
